

ML-116 AUDIO PAD INSTALLATION

ATTENTION

If your background audio signal is too loud and you cannot resolve the issue by lowering the gain on the amplifier and turning up the mixer, you may insert this audio pad. This audio pad is designed to give you a 16 dB cut in gain when connecting an unbalanced audio source to a background music input on ML-116 Systems. A kit is included with currently ordered ML systems or can be purchased separately under FSR part number 29035. This kit contains enough components for four inputs.

Resistor Color Code

1K Resistor – Brown Black Red Gold
4.7K Resistor – Yellow Violet Red Gold
