FSR Makes Technology Spaces Easier to use...

Your Meetings are Clear for Takeoff

On-table Retractors - Cable Pilot on-table retractors give meeting spaces a clean way to manage HDMI or USB-C connectivity directly at the touch controller. The compact 7" x 7" and 7" x 10" models sit neatly beneath the controller and provides up to 6' of cable payout for BYOD connections.

Under-Table Retractors -

The CPRT-UT line keeps the retractor hidden below the work surface while still giving users reliable cable access. Provided brackets allow multiple mounting orientations, & the 4-roller cable nozzle supports smooth cable deployment of 5' of payout.

Table-Port Option Retractors - The CPRT-TP1 and CPRT-GR provide a clean way to pass a single cable through the tabletop when paired with a CPRT-UT under-table retractor. The CPRT-TP1 mounts in a 2 3/8" (60 mm) to 2 1/2" round hole with a black or clear anodized aluminum rim. The CPRT-GR mounts a retractor under various size and colors table pass through grommets. These solutions help keep the cable path neat on the table surface.

Edge-Port Retractors -

The CPRT-EP1 accessory is designed for installations where the under-table retractor needs to sit behind a table skirt or back from the table edge. It helps guide the cable from the hidden retractor to the user-facing access point without the retractor sitting at the table's edge.

Table Boxes with Cable Pilot Retractors Installed -

Under-table retractors can be integrated into RT6 or CT6 table box configurations to keep the work surface organized while preserving connectivity access. The RT6-CPRT-S3, RT6-CPRT-S4, CT6-CPRT-BLK, & CT6-CPRT-ALM table boxes allow retractors to be mounted on the left & right sides of the box.

Easier to Secure...

Touchscreen Covers

Flush Mount - Our flush mount touchscreen covers protect mounted touchscreen panels with a clean & flush to the wall design. The locking metal enclosure and impact-resistant window help prevent tampering, while the adjustable-depth mounting provides a more precise fit for deeper touchscreens.

Surface Mount - Our surface-mount touchscreen covers provide secure control panel protection with a locking key. The locking metal door and impact-resistant window help protect the touchscreen while allowing monitoring.

Surface Mount XL - The surface screen cover gives installers another option for protecting access to a larger 7" touch screen. It uses the same security-minded approach with a locking cover and impact-resistant window for visibility.

Surface Mount Combination Locking -

Our combination locking touchscreen covers add keyless convenience. The combination lock can help in shared spaces where multiple authorized users may need access without the need to manage keys.

Surface CMU Wall Mount -

The wall mount enclosure provides a secure environment for touchscreens that need to be mounted to a non-penetrable wall surface. The combination locking access door and ADA compliance it is the perfect solution for schools, event spaces, convention halls and maintenance corridors or any CMU construction. The combination lock is provided with a master key to open the door, determine the combination, and set the lock to your desired 4-digit code.

& Easier to Keep Running.

Outdoor Wall Box

The OWB-CP2 outdoor wall box is designed to mount a variety of 10" touch screens. The square shape allows mounting in any orientation so the door can swing left, right or up. The enclosure is available in white with a window door style.

Hatch Series Covers

The Hatch Series covers design allows for installation on resilient floating wood, sports, or gym floors that require movement in both the horizontal and vertical directions. Hatch covers allow installers to custom-fit the flooring material into the cover, maintaining any required graphics.

SYMPHONYCONNECT

Universal Modular Power System

The next evolution of our Symphony table boxes is built for portable table environments where users require power for phones, tablets, & laptops. This version introduces a modular power setup with pluggable inter-connecting cables, allowing table boxes to be easily daisy-chained without hardwiring. The Symphony Connect can daisy-chain up to 6 devices with a maximum length of 50'. Optional tees and extender cables are available. All connectors meet UL locking requirements and are equipped with a figure-press release for both safety and user convenience. Connect units are available in black, with mounting options that include under-table & clamp-on styles.

High-Capacity Floor Box

FLH6 High-Capacity Floor Box - The FLH6 floor box series is designed for high-traffic environments where both durability and appearance matter. Its high-load covers are rated to support 20,000 pounds, making the system suitable for areas automobiles, scissor lifts, and other heavy equipment.

FL-300-FF-B & 340-FF-B

Floor Box Family

FSR's new FL-300-FF brings furniture feed capability to FSR's floor box families. This floorbox provides a pathway directly from the floor box up into the furniture. The floor box has a main cover and three cover plates that attach to the main cover. Cover plate options include a blank, 1½", or ¾" KO. Designed for flexibility, the FL-300-FF has two back box models, one containing a rim and box securing clamps for raised access. While the other model contains standoffs for a concrete pour. For stained concrete or Terrazzo flooring, this line offers a shim kit. These floor boxes will be available in four trim options in two colors. The FL-300-FF is UL scrub water rated, offering a smaller box option with furniture feed capabilities.

FSR

45^{year} anniversary

**We're proud to
recognize decades of
innovation, teamwork,
and dedication across
the company.**
