

HuddleVU T6-FLEX Operation Guide

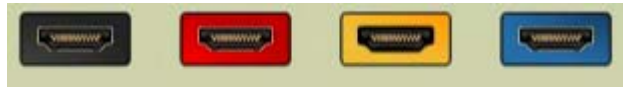

Below is the Flex Splash screen. Tap anywhere on the screen to advance to the selection screen.

This particular guide will show the operation of a system which utilizes 4 monitors (outputs) and 4 input selections (HDMI depicted in this configuration). The operation of all other combinations of inputs and outputs work in a similar manner.

This is the power on / power off button. Press to start all output devices.

Select any of the inputs by tapping on the icon.

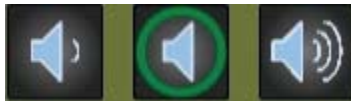

Select any of the Output monitors or quickly select multiple output monitors.

At any time different inputs and outputs may be selected.

Selection of an individual output device will show a red speaker icon above. This indicates which monitor is now being controlled by the banner volume and mute buttons.

Volume and mute can be controlled with these buttons. Select the output device and then adjust the volume or mute. Note: individual selections for volume and mute can be selected and maintained.

To adjust any of the initial output monitor configurations, press and hold the monitor button until the TV-CONTROL screen appears?

Make any necessary adjustment and press the CLOSE button.
