

QUICK START GUIDE

The Cable Pilot series provides a clutter-free, retractable HDMI or USB-C cable connectivity for meeting spaces. Each Retractor stores up to 6 feet of cable, and the self-retracting design neatly stores the slack when it's no longer needed. With Cable Pilot, your meetings are cleared for takeoff.

1 Connecting Your Touchpanel

Plug the retractor's cable tail end directly to your meeting touch controller input.

2 Connecting Your BYOD

Once the desired length is reached plug the retractor's connector into laptop.

3 Quick Pull & Release to Retract Cable

Using a simple flick of the wrist, pull the cable out approximately 2" and guide connector back to retractor housing.
