

How to send a Flex Control Builder Project to FSR for review

Follow these steps to send a project, or any other requested files to FSR.

Use the WINZIP program to combine and compress your project file into one convenient file which can be emailed to FSR. The same procedure may be used to send Libraries or other files.

Using Windows Explorer, migrate to the Documents\Public Documents\FSR\Flex Control Builder\Projects

Locate your project folder name. This is the folder you want to ZIP and send to FSR. The method of zipping and the destination may vary. However, most systems you will right click on the folder and from the menu selection, move mouse pointer over the SEND TO menu item, and a new menu will appear. Select the Compressed (ZIPPED) folder. Now select the location to send the compressed zipped file to. Windows 7 users may be forced to send it to desktop.

Now locate the zipped file, attach it to an email and send to the address given to you by the Service Representative.

Similarly, follow the same compressing (ZIP) procedure for any other folder or file requested by the Service Representative.
