## change the mood in your classroom with a little **POP**

Power, Charging, and a POP of color Just Where You Need Them.

Color affects our daily lives far more than we realize. In the classroom, skillful use of colors can boost students' productivity, health, and even happiness. Studies have shown that tapping into color psychology can also improve students' creativity and enthusiasm. For instance, yellow colors evoke feelings of happiness and summer. We all know students love the thought of Summer. A little touch of orange and yellow can brighten learning environments, making it more joyful. The Symphony POPs combine vibrant colors with accessible power and charging to any classroom.
