**DESCRIPTION**

The PWB-270 housing is specifically designed to quickly and easily house a variety of Crestron model DM-RMC series devices behind a wall mounted display or a projector. The devices are mounted to a removable universal bracket which is in turn mounted to the PWB-270 back box. It is also available as a PWB-273 3” deep unit.

The back box is typically installed flush with the wall’s surface, between either wood or steel studs. The appropriate mounting screws are included. A duplex box is also included for convenience and can be mounted at either the top or bottom duplex knockout areas on the back box. There are two 1” and 1.25” concentric knockouts on the top and bottom for cable/conduit entry and cable tie slots for cable management. Cable ties are included.

There is a two part vented cover, available in black or white, that provides convection cooling for the internal components. A slot on the cover facilitates passing cables through for external devices such as projectors and is designed to strain relief the cables as they exit.

**FEATURES**

- Rugged 16 gauge steel back box
- Black or white 1/16” painted two part cover
- Simple installation
- Hardware included
- Connections and cables are hidden behind cover for a neat install
- Multiple knockouts in a variety of sizes
