**PCI-5BWPA**

The PCI-5BWPA is a high-resolution passive computer video and stereo audio interface single gang wall plate. It interconnects an HD-15 female connector mounted on the wall plate face to a 5 BNC female cable array. The audio source enters through a mini stereo plug, is transformer balanced, and outputs on screw down terminal blocks. The PCI-5BWPA is the perfect choice for any application that requires a convenient short distance connection point from your computer to your display.

All active CI-5 units are designed to precisely match the attenuation characteristics of FSR high resolution video cables. When used with FSR cables you can expect to achieve an unprecedented level of flatness in your video system. The Decora style faceplate color options are black or white. All units fit easily into any standard single gang box.
